Install K-Talk AI on your Home Screen

Step-by-step guide for iPhone and Galaxy (Android)

Use K-Talk like a real app, without the app store

K-Talk AI is a website that can be added to your phone's Home Screen. After that it opens full screen, with its own icon, just like an app. It is free and takes less than a minute.

Website address

https://www.doke-v.net

Scan to open the site

Choose your phone

iPhone

Use Safari

Guide on Page 2

Galaxy (Android)

Use Chrome or Samsung Internet

Guide on Page 3

Before you start

- Open the site in your phone's own browser: Safari on iPhone, Chrome or Samsung Internet on Galaxy.
- If the link was opened inside KakaoTalk, Naver, Instagram or another app, the Home Screen option is not available there. Open the menu and choose "Open in Safari" / "Open in other browser" first.
- In the app itself you will also see a button labelled 앱 설치 (Install app) at the top of the page. On Galaxy it can install the app directly. On iPhone it shows the steps in this guide.
- The app needs an internet connection to work.

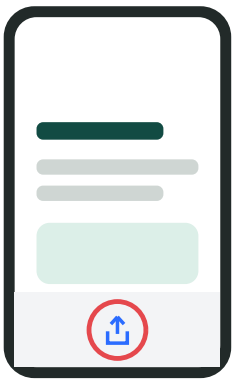
iPhone | Add K-Talk to the Home Screen

Works in Safari (iOS 16 or later recommended)

1 Open the site in Safari

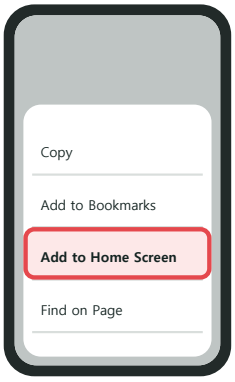
Open the Safari app and go to https://www.doke-v.net. Wait until the page has loaded.

Tip: if the link is inside KakaoTalk or another app, copy it and paste it into Safari.



2 Tap the Share button

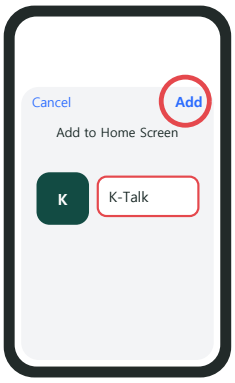
Tap the Share button: a square with an arrow pointing up. It is in the bar at the bottom of the screen (or inside the address bar on newer iOS versions).



3 Choose "Add to Home Screen"

Swipe the list upward and tap "Add to Home Screen".

Not in the list? Scroll to the bottom, tap "Edit Actions", and add "Add to Home Screen".



4 Tap "Add"

Keep the name "K-Talk" (or rename it) and tap "Add" in the top-right corner.

If you see an "Open as Web App" switch, leave it on.

Done! The green K-Talk icon is now on your Home Screen. Tap it to open the app full screen.

Trouble? See the checklist on the last page.

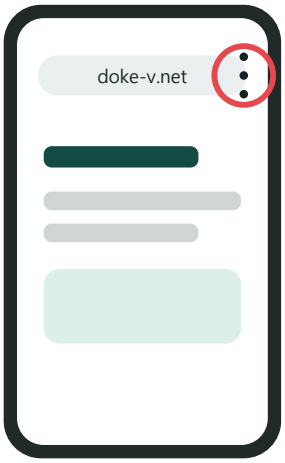
Galaxy (Android) | Add K-Talk to the Home Screen

Chrome (recommended) or Samsung Internet

A. Using Chrome

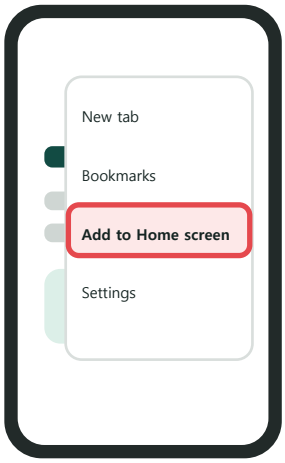
1 Open the site in Chrome

Open Chrome and go to https://www.doke-v.net.



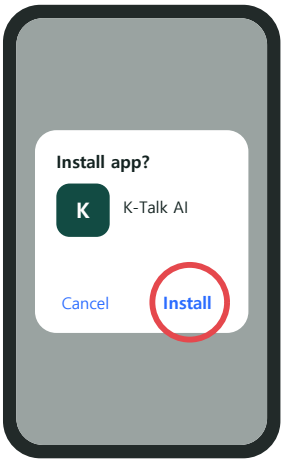
2 Tap the menu

Tap the three dots in the top-right corner of Chrome.



3 Tap "Add to Home screen"

In the menu, tap "Add to Home screen". On some phones it is called "Install app".



4 Tap "Install" or "Add"

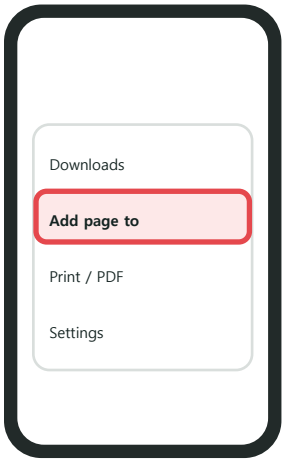
Tap "Install" (or "Add"). If asked, tap "Add" once more to place the icon.

Tip: the "앱 설치" (Install app) button at the top of the K-Talk page can also start the installation on Galaxy.

B. Using Samsung Internet

1. Tap the menu

Tap the three lines (menu) at the bottom-right of the screen.



2. Add page to → Home screen

Tap "Add page to", choose "Home screen", then tap "Add".

Troubleshooting

If the Home Screen option does not appear

I cannot find "Add to Home Screen" (iPhone)

- You are probably inside another app (KakaoTalk, Naver, Instagram). Copy the link, open the Safari app, paste it in the address bar, then try again.
- Make sure you are using Safari, not a preview window. Tap the share button, scroll down to the bottom of the list, tap "Edit Actions" and add "Add to Home Screen".
- Private browsing tabs can hide the option. Open a normal tab.

The "Install" prompt does not appear (Galaxy)

- Use Chrome or Samsung Internet. In-app browsers cannot install web apps.
- Open the three-dot menu and look for "Install app" or "Add to Home screen".
- Update Chrome from the Play Store, then reload the page.

The page looks old or something is missing

- Pull down to refresh, or close the tab and open the address again.
- After the app is installed, close it fully and reopen it to load the newest version.

I want to remove the app

- Press and hold the K-Talk icon on the Home Screen, then choose "Remove" (iPhone) or "Uninstall / Remove" (Galaxy). Your learning records stay in your Google account.
